Connect
Your new smart device to help us take care of you and your home

Certified

Corporation

Proactive property management

Fix problems fast: Connect helps us identify issues like damp and mould quickly, before they become big problems.

Smart data: Collects home performance data to ensure your home is in good condition and to see if things like insulation or heating need upgrades.

Easy communication

Stay updated: A small light will show when there is a message for you. All messages are secure and only about your property.

Feedback or appointments: Easily answer survey questions about our housing provider service or choose a suggested appointment time that works best for you.

Temperature display

Connect is also a convenient room thermometer that uses blue for cold, green for ideal and yellow for warm and orange for too hot when it comes to your room.

**"When you are old, you're not very up with technology,
but it is very easy to use."**

Mrs Green, resident

**"It's just plain, easy questions and a yes or a no. It's very simple.
If you have got any issues, then you haven't got to make phone calls
and wait in queues."**

Mrs Shaw, resident

Important note

No impact on heating/hot water control: Connect will not replace your existing thermostat. Continue using your current system as usual.
